

Concentrated grape juice production

One of our suppliers began this January the grape processing for concentrated juice production. In this same factory they produce, since August 2001, frozen concentrated orange juice, which is exported to several countries.

Industrial grape, which installation of new equipments demanded investments of about US\$1,7 million, is part of a project which will also process there other fruits, such as pineapple and passion fruit.

An opportunity to add value inside the property diversification process, grape generates today 500 jobs on the field. The capacity installed is for 10 thousand tonnes (40 days of operation), with the production of 1,5 thousand tonnes of concentrated juice.

Inside this integrated project, the producer has security, since choosing the plants, technical assistance in all the steps of the process, guaranteed trade and he still has a part in the industrial result.

FCOJ supplier increases production in 20%

One of our FCOJ's most reliable suppliers finished 2006 crop with a production 20% higher than the last crop, according to plant's January report.

The plant is investing to have the capacity to receive, in 2010, about 7,5 million orange boxes (each one with 40,8 Kg), sufficient to produce approx. 30 thousand tonnes of concentrate, against 2,088 million orange boxes received this year, that represents around 11 thousand tonnes of concentrate. "This year, 90% of the production supplied the international market as Europe, South America, Middle East, Asia and USA", says the plant.

Regarding the Quality Assurance program, the goal of the plant is to have the ISO 14001 Certificate implemented before the first half of this year.

Traditional Pineapple Juice supplier starts processing Passion Fruit

The current problem in passion fruit supply will certainly be diminished next season, because one of our oldest suppliers, that until now worked strongly only with pineapple juice, has adapted one of its plants for passion fruit processing.

It is important to note that this factory is under the most rigid quality standards and we will surely be able to offer the clients a product suitable to their needs.

FCOJ for prompt shipment

Our Northeast FCOJ supplier, which year production's capacity is of 30.000 tons, is now processing Ratio 14/16 FCOJ with availability for prompt shipment from Brazil and Coldstorage Europe.

The FCOJ is packed in standard metallic drums and/or wooden bins.
