2012 tomato crop complicated, producers indicate

The uncertainty scenario for the 2012 crop of tomatoes in China continues. Industry players indicated that the reduction in planted area will result in fewer than 5000 tones of fruit to be processed.

In Brazil, where most of the factories are already processing, the news are not good also as in the southern state of Goiás producers have lost areas planted to be harvest on the beginning of the season now in June due to hail and producers throughout the State are claiming that yield per hectare and brix are below average.

Mango: ready to ship!

Now crushing Brazilian mango season of Tommy Atkins, product is available for prompt shipment: aseptic or frozen, single strength min. 14 Brix or concentrate 28/30 brix.

Outside this country, other products origin asks attention as India suffers crop reduction, due to many factors, like credit limit care, climate conditions, as well as natural crop size control, and also

Colombia is sold out.

On consumption side, a big soft drinks bottler suggested to increase mango puree/ concentrate usage as a toehold for sales rise in South America, where mango taste is very popular – so smaller availability and high demand can be an explosive mix, therefore a good time to guarantee your coming needs.

New season: take a look on FCOJ and orange oil

2012/2013 season is starting and, as per market sources, about 6% reduction is confirmed, besides early varieties that are not being crushed by the big producers in São Paulo; as per Brazilian National Association of Juice Exporters (CitrusBR) that says “the equivalent of up to 83 million boxes could go to ground”.

Product ratio average is good now due to stock available that is being consumed until mid varieties arrive to the big industry so new season standard product shipments from them must be arriving in Europe about September.

In Florida, situation, as resumed by Juice Market of July/12 is “Disease and a lack of planting means the tree population getting smaller every year”, asking attention not for this year alone but for the future.

For by products, this delay in processing onset brings more delay for aldehyde 1.2% as well as it gradually reduces d’limonene availability with prices for both at the stabilized level now. Keep in mind Atlântica Foods as your independent source of supply!

We would like to thank all the 123 people who came to our booth in Fispal Tecnologia fair in São Paulo, Brazil. It was a pleasure to have received all of you! We remain at your disposal to fulfill your needs of food raw materials.
