ACCURATE INFORMATION FOR YOUR BUSINESS

ISSUE 033 - MAY / 2012 :: BIMONTHLY NEWSLETTER

Excellent color content red grape juice

Brazilian refrigerated red grape juice concentrate, 68 Brix is also available for exports, after the end of the harvest season, about a month ago, and the update of the fruit yield results in the last edition of this Newsletter; our product has an extremely high color content, besides being produced with non-wine grapes, American varieties, called Concord type.

It is the best option for a Premium product!

FCOJ

Following the latest market trends, please have in mind Atlântica Foods as your independent supplier of Orange Juice Concentrate, being able to offer today a High Ratio product (17+), in drums, from the last spot volumes available from the 2011/2012 harvests.

Please let us know your interest by replying this publication, and you will be promptly contacted by our commercial department in order to have your needs met, while the new season comes and, as usual, with low ratios at the beginning.

São Paulo's peanuts harvest ends in May

São Paulo's peanuts harvest ends in May and the producers, who planted to harvest a super crop, assess the losses caused by the lack of rain, which resulted in small grains and of lower quality. According to the Brazilian Institute of Geography and Statistics (IBGE), the harvest is not expected to reach 250,000 tons, being 2.5% lower than the previous year.

Uncertainties rule over the next Chinese tomato crop

The scenario for the 2012 tomato Chinese crop that will start in July is quite uncertain at the moment.

According to sources of that country, there is a reduction in the planted area that can

reach 25%, which would raise prices by up to 35%.

Thus, we are watching and monitoring the market in order to always provide our customers with the best trading conditions.

Drought to affect next Brazilian cashew nut crop

Ceará, Brazilian main producer of cashew nuts, has been suffering from drought, which certainly will have consequences on the next crop, because if this situation persists, there will be an impact on

the volume or if it starts to rain in May, a delay will occur given the fact that the plants require a 90 day period of drought after the rainfalls, so that flowering and maturation take place.

Tangerine juice concentrate – start up delayed due to climate conditions

Tangerine prices are not open yet, because the amount of fruit brought for processing is still very small and it does not present the quality required by our industry, due to climate conditions that delayed the fruit maturation process.

From our side, we keep monitoring the situation closely and will inform our clients accordingly, but keep in mind that a fast taking position shall be necessary when the fruit comes, once the product will be processed only upon request.

Atlântica Foods participates in another edition of **FISPAL TECNOLOGIA** fair, between **June 12th and 15th**. We invite everyone to visit our booth on the **aisle E, booth 203** at Anhembi pavilion, in São Paulo. It will be a pleasure to welcome you!
